Volume 28, January–June 1987

CONTENTS

Mathematical Physics

Implementation and comparative study of random sequences for nonlinear least square data fitting
Tapas Bandyopadhyay and P K Sarkar 97–108

Quantum Mechanics

Semiclassical approximation for relativistic potentials *J Thakur* 1–8

The generalized Pauli-Lubanski vector for massless spinning particles in arbitrary space-time dimensions *M V Atre* 233–239

Equivalent potentials for a nonsymmetric non-local interaction
G C Sett, U Laha and B Talukdar 325–334

General Relativity, Gravitation and Cosmology

Kerr-Newman metric in deSitter background
L K Patel, Sharda S Koppar and P V Bhatt 109–115

Nonsingular cosmological models with torsion determined by vacuum polarization of quantum fields *I L Buchbinder and S D Odintsov* 241–245

Statistical Physics

On the short-time behaviour of quantum unstable systems
V J Menon 335–341

Thermodynamic properties of molecular fluid mixtures of hard ellipsoids *A K Singh, U N Singh and S K Sinha* 343–354

Local quantum statistics in arbitrary curved space-time
P Pronin and I Kulikov 355–359

Microscopic theory of soliton propagation in a mixture of two boson fluid films *A C Biswas* 361–366

Interpolation model for molecular reorientation in gases and liquids
S K Deb and A K Sood 367–378

Particle Physics

Superconformal transformations of the $N = 2$, $D = 4$, SSYM
Mayank R Mehta 9–14

Tree-level breaking of SU (2) × U(1) in general SUGRA theories
Anjan S Joshipura, A Mukherjee and Sanjeev K Soni 15–22

Phenomenological structure functions and Gribov-Lipatov relation
D K Choudhury and A K Misra 23–34

Slope parameter and scaling of differential cross-section of Λ-*p* scattering *J K Mohapatra, S Mohanty and S N Nayak* 35–39

Analytic representation for ^{3}He form factors
K N Agrawalla and M K Parida 117–130

Relativistic effects on meson spectra
S P Misra, S Naik and A R Panda 131–158

Production of tachyons and antiparticles in extended manifolds of general relativity *A P Trofimenko and V S Gurin* 379–386

Chou-Yang model and predictions for high-energy pion-deuteron scattering *Sunachand Patel and M K Parida* 607–616

Equivalence of stochastic quantization to field theories from supersymmetry *S Chaturvedi, A K Kapoor and V Srinivasan* 617–619

Supersymmetric $SU_C(4) \times SU_L(2) \times SU_R(2)$ and spontaneous breakdown of symmetries *B Bhuyan and B B Deo* 621–632

Relativistic extension of the Hohenberg-Kohn theorem *S N Datta* 633–639

Nuclear Physics

Heavy-ion fusion cross-section calculations in classical microscopic equations of motion approach *S S Godre and Y R Waghmare* 41–44

Off-shell variation in the binding energy of triton *Md. Yasin* 247–256

Density of nucleons in heavy nuclei *Nazakat Ullah* 641–644

Calculation of geometrical coupling coefficients for the hyperspherical harmonics approach *Tapan K Das and Tushar Baran De* 645–651

Instrumentation

Design studies of a 100 MeV proton linear accelerator
P Singh, R Mythili and M G Betigeri 257–267

Atomic and Molecular Physics

Theoretical study of ^{14}N pure quadrupole resonance in amino acids
B V R R K Murty, G Krishna Kishore, D Krishna Rao and G Satyanandam 45–50

On the direct determination of constrained pure state one-electron density matrices: II. A modified algorithm and its applications
Kalyan K Das, Priyotosh Khan and Sankar P Bhattacharyya 51–58

Isotope shift studies in the spectrum of boron monosulphide
Sheila Gopal and G Lakshminarayana 159–165

Electron impact excitation of hydrogen and helium in Coulomb-projected Born methods *C S Singh and D K Rai* 167–179

Modification in high energy higher order Born approximation
K Suja and H S Desai 387–397

Quenching of excitations in an impure molecular crystal
S Priyadarshy and S N Datta 653–660

Optics

Kramers-Kronig type of dispersion relation in nonlinear optics
P Sen and P K Sen 661–667

Spectroscopy

Transient excited singlet state absorption in Rhodamine 6G
Putcha Venkateswarlu, M C George, Yerneni V Rao, H Jagannath, G Chakrapani and A Miahnahri 59–71

Plasma Physics

Near perpendicular propagation of ion cyclotron modes in a deuterium-hydrogen-oxygen fusion plasma *Chandu Venugopal* 181–193

Weak electron acoustic double layers in a multicomponent plasma
K S Goswami and S Bujarbarua 399–408

Condensed Matter Physics

Precise lattice parameter measurements in CsCl-Br solid solutions between room temperature and 90°K by powder x-ray diffraction
V Ganesan and K S Girirajan 73–79

X-ray diffraction and colour centre studies on RbCl-RbBr mixed crystals
K Srinivas, Mohd. Ateequddin and D B Sirdeshmukh 81–86

Temperature invariance of S_0-parameter of polymers
B K Sharma and R R Reddy 195–203

Collective excitation modes in the intermediate and superconducting states of doped and undoped indium and lead
V V Joshi and K D Chaudhuri 205–215

A three-body force shell model calculation of Schottky defect formation energies of ionic crystals with CsCl structure
V Mishra, S P Sanyal and R K Singh 217–228

The dielectric constant of the binary liquid system *n*.heptane + methanol near its critical temperature
Y Jayalaxmi, S Guha, V C Vani and E S R Gopal 269–275

Effects of various ambient-aging processes in chopped and non-chopped optical films *K Vijaya, R K Puri and R N Karekar* 277–285

Phonon dispersion curves of transition metals using modified general tensor force model *Satish Kumar Mahna* 287–292

Photoacoustic determination of energy band gap of semiconductors
R S Ram, Om Prakash and A N Pandey 293–297

Stabilization of valence fluctuations in the cerium solid by the time-dependent collision approach *Ratan Lal* 299–310

Refinement of twinned crystal data
Sandhya Bhakay-Tamhane and A Sequeira 409–413

Precession photography of fibres: Prediction of patterns
M Sundaramoorthy 415–424

Electronic contribution to electric field gradient in dilute alloys
K V K Nair and N V Nair 669–673

X-ray electrical conductivity, magnetic and infra-red studies of the system $CO_{2-x}Ge_{1-x}Fe_{2x}O_4$ *Prabha Nathwani and V S Darshane* 675–688

Unified study of alkaline earth metal *Suratna Das and A Sarkar* 689–697

Rapid Communications

High-temperature superconductivity in the 100 K region in perovskite-related oxides of the Ln-Bu-Cu-O (Ln = Y or La) system
P Ganguly, A K Raychaudhuri, K Sreedhar and C N R Rao L229–L231

Flexoelectric origin of oblique-roll electrohydrodynamic instability in nematics *N V Madhusudana, V A Raghunathan and K R Sumathy* L311–L316

Electron-fluctuating distortion interaction in the new high T_c superconductors *R Jagadish and K P Sinha* L317–L319

Identification of the high-temperature superconducting phase in the Y-Ba-Cu-O system as the pervoskite $YBa_2Cu_3O_{7\pm\delta}$
P Ganguly, R A Mohan Ram, K Sreedhar and C N R Rao L321–L323

An 'EPR' study of $YBa_2Cu_3O_7$ and related high temperature superconductors *S V Bhat, P Ganguly and C N R Rao* L425–L427

A Lagrangian basis for Ashtekar's reformulation of canonical gravity
Joseph Samuel L429–L432

Constraint on unstable photino mass from a superlight gravitino
Tanmoy Bhattacharya and Probir Roy L699–L704

Observation of inverse a.c. Josephson effect in bulk Y-Ba-Cu-O possessing high T_c
A K Gupta, S K Agarwal, B Jayaram, Anurag Gupta and A V Narlikar L705–L708

Endothermic quasicrystalline-to-crystalline phase transition in Al_6CuMg_4 *M K Sanyal, V C Sahni and G K Dey* L709–L712

Electro-magnetic response of a single phase Y-Ba-Cu-O compound superconducting in the 90 K range
V Nagarajan, P L Paulose, A K Grover, S K Dhar and E V Sampathkumaran L713–L719

Comments

Existence of quantum soliton for ϕ^6-like field theories in $1+1$ dimensions *C N Kumar and B K Parida* 87–93

Some remarks on the finiteness of soliton mass
R K Kaul and R Rajaraman L95–L96

Erratum 605

Special issue on Indo-Soviet Conference on Low Temperature Physics
Foreword 433
High pressure techniques at low temperatures
S Ramaseshan, G Parthasarathy and E S R Gopal 435–469

Low temperature elastic behaviour of As-Sb-Se and Ge-Sb-Se glasses
E S R Gopal, T S Mukundan, J Philip and S Sathish 471–482

Electromagnetic generation of ultrasound in metals at low temperatures
A N Vasil'ev and Yu P Gaidukov 483–488

Phonon drag effect in three- and two-dimensional electron systems
N V Zavaritsky 489–501

Low temperature resistance fluctuation in disordered conductors
N Kumar 503–508

Resistivity of metallic systems with a strong dynamic disorder
V F Gantmakher, G I Kulesko and V M Teplinsky 509–516

Josephson voltage standard at National Physical Laboratory, New Delhi
A K Gupta, N S Natarajan, V S Tomar, N D Kataria, V K Batra, A V Narlikar and K Chandra 517–527

Transformation kinetics of A-15 superconductors formed by solid state reactions *A V Narlikar* 529–545

Disorder in superconductors—a study on $Cu_2Mo_6S_8$ *P Chaddah* 547–553

Structural instability and superconductivity in niobium-titanium alloys
T S Radhakrishnan 555–564

Theoretical studies on magnetic superconductors
R Jagadish and K P Sinha 565–571

Phase transition studies of paramagnetic crystals at low temperatures
S K Dutta Roy and B Ghosh 573–581

Nuclear magnetic resonance studies in rare earth ternary phosphides
R Vijayaraghavan 583–587

Abstracts

Layered structure of superfluid ^{4}He at supercritical motion
L P Pitaevskii 589

Study of the two-domain processing structure in the superfluid ^{3}He-B
A S Borovik-Romanov, Yu M Bunkov, V V Dmitriev, Yu M Mukharsky and I A Fomin 590

Roughening (faceting) transitions on the helium crystal-superfluid interface
A V Babkin, K O Keshishev, D B Kopeliovich and A Ya Parshin 591

Quantum interference of electrons in disordered metals
B Yu V Sharvin 592

Residual conductance fluctuations of tiny disordered conductors
B L Altshuler, D E Khmel'nitskii and B Z Spivak 593

Experimental study of resistivity of metallic materials with dynamic disorder *V F Gantmakher, G I Kulesko and V M Teplinsky* 594

Nonstationary phenomena in Si MOSFET's in the quantum Hall effects regime *V M Pudalov, S G Semenchinsky and V S Edel'man* 595

Electron fluid and quasiparticles in the quantum Hall effect
V L Pokrovsky and A L Talapov 596

Unusual superconductivity and its physical properties *L P Gor'kov* 597

Superconductivity of the twinning plane *I N Khlustikov* 598

Investigations of UBe_{13} of other compounds of Be and U in normal and superconductive states *N E Alekseevskii* 599

Disordered magnets *M V Feigel'man* 600

Spin waves in paramagnetic Boltzmann gases *E P Bashkin* 601

Magnetic properties and peculiarity of magnetic states in dilute antiferromagnets $Mn_{1-x}Zn_xF_2$ *A N Bazhan and S V Petrov* 602

Periodic density redistribution of parametrically excited spin waves in an antiferromagnet *A I Smirnov* 603

Frozen photoconductivity in PbTe films
I P Krylov and Ya B Pojarkov 604
